

SQUARE 20-Screen Master Table

Purpose, point-form features, core functions and end-to-end user journey

20 INTERCONNECTED SCREENS From welcome and consent to analysis and long-term management	6 FUNCTIONAL GROUPS Governance, dashboard, processing, interpretation, intervention and monitoring	1 CONTINUOUS JOURNEY Upload, understand, act, follow up and improve
---	--	---

User Journey Flow

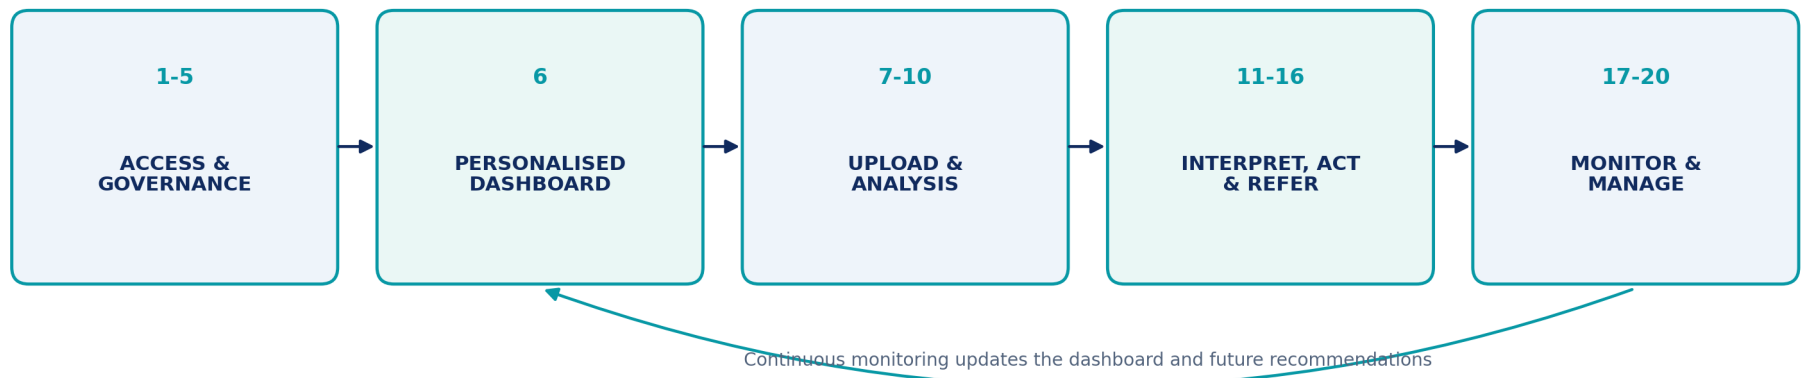

Figure 1. SQUARE user journey from access and consent to continuous monitoring.

How to Read the Master Table

- Purpose explains why the screen exists in the user journey.
- Main features lists the essential interface components in point form.
- Core function / output describes what the screen does or produces for the next stage.

Master Table: All 20 Screens

Each row defines the minimum essential role of one screen. Features may be progressively released while preserving the complete journey logic.

No.	Screen	Purpose	Main Features	Core Function / Output
1	Welcome Homepage	• Introduce SQUARE • Explain the core health journey • Guide new and returning users	• Brand and service overview • Upload - Understand - Act - Follow Up pathway • Register and Log In buttons • Privacy and safety messaging	• Routes users to registration or login • Establishes trust and platform expectations
2	Registration Page	• Create a secure account • Keep initial registration short	• Name and contact details • Password creation and confirmation • Basic eligibility confirmation • Links to Terms, Privacy and Consent	• Creates the user account • Defers detailed health questions until needed
3	Log In Page	• Provide secure account access • Support account recovery	• Email or mobile login • Password visibility control • Remember device • Forgotten-password recovery • Future multifactor authentication	• Authenticates the user • Opens the personalised dashboard
4	Terms and Conditions	• Explain legal rules of platform use • Record user acceptance	• Readable section navigation • Version and effective date • Download option • Acceptance checkbox • Privacy Notice link	• Stores accepted version, date and time • Provides an auditable legal record
5	Consent Page	• Obtain informed data-processing permission • Separate required and optional consent	• Required service consent • Optional research participation • Communication preferences • Withdrawal information • Consent history	• Activates permitted data use • Keeps research participation voluntary
6	Personalised Health Dashboard	• Provide the central health overview • Connect all platform functions	• General health summary • Priority recommendations • Anthropometric compartment • Anatomical domain map with organ status • Upload, reports, trends, referrals and settings shortcuts	• Acts as the main navigation hub • Shows current status and next actions

No.	Screen	Purpose	Main Features	Core Function / Output
7	Upload Blood Report	- Collect laboratory reports securely - Prepare files for extraction	- PDF, JPG and PNG upload - Camera capture - Laboratory, date and report type - File-quality checklist - Manual-entry fallback - Recent reports	- Stores the original report - Starts extraction after validation
8	Report Recognition and Verification	- Confirm extracted laboratory data - Prevent scan and formatting errors	- Original report preview - Editable values, units and ranges - Confidence indicators - Uncertain-field flags - Verification confirmation	- Creates a user-confirmed structured dataset - Preserves traceability to the original report
9	Triggered Health Questionnaire	- Collect relevant health context only - Avoid an unnecessarily long questionnaire	- Adaptive question logic - Section progress and time estimate - Autosave - Why we ask this explanations - Not sure and Prefer not to answer options - Automatic skipping	- Adds context for risk and safety assessment - Personalises interpretation and advice
10	Analysis Processing	- Show transparent analysis progress - Explain what the platform is checking	- Data validation - Unit and reference-range alignment - Health-domain assessment - Safety screening - Recommendation generation - Completion notification	- Combines verified results, profile and answers - Produces structured analysis outputs
11	Health Analysis Summary	- Present the most important findings first - Avoid overwhelming the user	- General health comment - Findings needing attention - Safety priority - Domain-status overview - Top three actions - Referral and download controls	- Produces the executive health summary - Directs users to details or action
12	Detailed Blood Results Interpretation	- Explain individual laboratory markers - Connect values with understandable next steps	- Search and filters - Value, unit and laboratory range - Visual range position - Result trend - Plain-language meaning - Influencing factors and suggested actions	- Generates educational marker interpretations - Avoids presenting results as a diagnosis

No.	Screen	Purpose	Main Features	Core Function / Output
13	Health Domain Details	- Integrate related health information by domain - Show interactions between risk factors	- Cardiovascular, metabolic, liver, renal, haematology and anthropometric tabs - Relevant laboratory and profile factors - Protective factors - Factors to improve - Calculator eligibility - Domain-specific actions	- Produces an integrated domain interpretation - Prevents isolated marker comments from losing context
14	Personalised Health Action Plan	- Convert findings into practical actions - Keep the initial plan manageable	- Three priority actions - Adjustable targets - Schedules and reminders - Completion tracking - Why this helps explanations - Later recommendations	- Creates a trackable wellness plan - Supports gradual behaviour change and follow-up
15	Referral and Safety Guidance	- Identify the appropriate level of care - Separate referral from wellness advice	- Emergency, prompt, routine and self-management pathways - Referral reason and timeframe - Recommended service type - Visit preparation checklist - Symptom-based safety guidance	- Generates clear referral guidance - Escalates care without claiming a diagnosis
16	Full Health Report Preview	- Review and customise the generated report - Control downloading and sharing	- Page and section preview - Section inclusion controls - PDF download and printing - Password protection - Recipient and access expiry - Sharing management	- Produces a portable health report - Keeps disclosure under user control
17	Health Trends and Progress Tracking	- Monitor changes over time - Assess data comparability	- Laboratory marker charts - Blood-pressure trends - Weight and BMI trends - Domain trends - Action-plan completion - Unit, range and fasting-status checks - Health timeline	- Supports longitudinal monitoring - Flags comparisons that may be unreliable
18	Profile and Health Information	- Maintain health context for future analyses - Request only missing or outdated information	- Personal details and anthropometrics - Medical, medication and family history - Lifestyle information - Self-reported, device-measured and report-extracted labels - Quality checks and reminders	- Maintains the current health profile - Leaves previously generated reports unchanged

No.	Screen	Purpose	Main Features	Core Function / Output
19	Reports Library and Management	• Store and organise reports and analyses • Preserve source-to-analysis traceability	• Search and filters • Original and generated file separation • Drafts and statuses • Comparison and downloads • Version history • Sharing access • Archive and delete controls	• Provides long-term report management • Maintains versions and access status
20	Settings, Privacy and Logout	• Manage preferences, rights and account access • Keep privacy choices visible	• Account, notifications and security • Language and accessibility • Consent and optional research controls • Data download and retention • Devices and sharing access • Support, logout and protected deletion	• Applies account and privacy preferences • Allows withdrawal, export, logout and controlled deletion

Essential Functional Groups

Functional Group	Screens	Platform Role
Access and Governance	1-5	• Introduce the platform • Create the account • Establish legal and consent permissions
User Control Centre	6	• Provide the central dashboard • Connect the complete user journey
Data Acquisition and Processing	7-10	• Upload and verify data • Collect triggered context • Run structured analysis
Health Interpretation	11-13	• Summarise findings • Explain individual markers • Integrate health domains
Intervention and Escalation	14-16	• Create the action plan • Guide referral and safety decisions • Generate the full report
Longitudinal Management	17-20	• Track progress • Maintain profile data • Manage reports, privacy and account settings

Core Journey Logic

- 1. Access and permission:** The user understands the service, creates an account and grants the necessary consent.
- 2. Data acquisition:** The user uploads a report, verifies extracted values and answers only triggered questions.
- 3. Interpretation:** SQUARE generates the overall summary, marker explanations and integrated domain views.
- 4. Action and escalation:** The user receives prioritised actions, referral guidance and a shareable report.
- 5. Long-term management:** New measurements and reports update trends, profile context and future recommendations.

Design principle: Every screen should move the user toward understanding, safe action or longitudinal follow-up without presenting educational interpretation as a medical diagnosis.
